

5th Semester BCA Summer Term 2026 (15th June – 20th July 2026)
Weekly Information Report – Internship

Student Name: VARSHA K N

USN:24BCAR0081

Specialization: ISMA

Week no: **1/2/3/4/5/6**

Date From: 19-06-2026

To: 27-06-2026

Summary of the work carried out in a week in Internship (Describe in 100 words):

WEEK 1- During the first week of the internship, I developed a Password Strength Checker using Python. I studied password security concepts and implemented validation rules based on password length, uppercase letters, lowercase letters, numbers, and special characters. The application evaluates password strength and classifies it as Weak, Medium, or Strong while providing suggestions for improvement. I tested the program with different passwords to ensure accurate results. I also documented the project, captured output screenshots, prepared the README file, and uploaded the completed project to GitHub. This project improved my Python programming and basic cybersecurity skills.

WEEK 2- During the second week, I developed a WiFi Password Security Auditor using Python. The project was designed to analyze the strength of saved WiFi passwords based on common security standards. I implemented password validation checks, generated security feedback, and displayed recommendations for creating stronger passwords. I tested the application with sample data to verify its accuracy and functionality. I also prepared the project documentation, captured screenshots of the output, created a README file, and uploaded the complete project to GitHub. This project enhanced my understanding of password auditing, cybersecurity concepts, Python programming, and software documentation.
